

Advanced Systems Consultants

Advanced Systems Consultants specializes in the application of Statistical Methods and Six Sigma to the service, manufacturing, production and fabrication industries.

Advanced Systems Consultants, is the original developer of the first methodology to achieve and sustain Six Sigma since 1986.

"The pyramid represents the robust approach to excellence embraced by Six Sigma. The crystal represents the clear vision of Six Sigma, and the three dimensional bell-shaped curve represent the normal distribution, the statistical foundation of Six Sigma"

Mario Perez-Wilson

ASC's 18 years of Crystal Clear Dissemination of 6 σ Knowledge

What is Six Sigma?

Six Sigma is an optimized level of performance approaching Zero-defects in a process producing a product, service or transaction. It is a statistic, metric, strategy, goal, benchmark, vision, and a philosophy. It indicates achievement and maintenance of world-class performance. Six Sigma allows you to achieve excellence by following its DMAIC approach to business process improvement.

Six Sigma Initiative

Recognizing that every client is singularly different, ASC pays particular attention in working with each organization to deploy a Six Sigma Initiative, that satisfies their specific needs. The following are the fundamental pillars of a successful Six Sigma Initiative:

Six Sigma Executive Overview

A half day session for the organization's executive leaders to crystallize the vision of the Six Sigma Breakthrough Model as a business strategy.

Presents:

- The essential elements to make embarking on Six Sigma a success.
- The strategy for deploying the Six Sigma Initiative.

Achieving Six Sigma

A full day session that covers the concepts, implications and challenges of Six Sigma and how to achieve that level of excellence.

Presents:

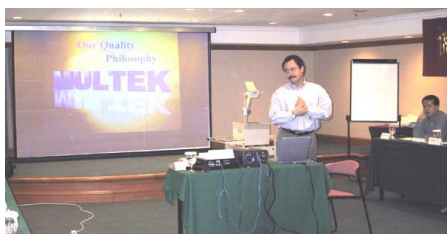

- The metrics, strategy and philosophy of Six Sigma.
- This course serves as a Six Sigma orientation for every individual in the organization.

Six Sigma Champion Training

A three day intensive Six Sigma training targeted for Champions or Team Mentors.

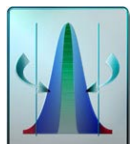

Presents:

- The leadership, team chartering, project selection and process classification concepts.
 - Basic Six Sigma metrics and an overview of the Methodology to achieve and sustain Six Sigma.

Six Sigma Training & Certification

To obtain a Six Sigma Black Belt or Green Belt Certification, the candidate is required to complete all assignments, a written examination, the successful completion of one Six Sigma improvement Project and demonstrate an understanding of the tools through implementation.

Six Sigma Black Belt

- **A Black Belt can realize savings over \$150,000 per project and can manage successfully multiple projects**

Six Sigma Black Belt Training and Certification

An intensive four week Six Sigma deployment strategy which includes training and certification of Black Belts.

Presents:

- The leadership, team building, project, process, and statistical tools for deploying Six Sigma.
- The Methodology to achieve and sustain Six Sigma.

Six Sigma Green Belt Training and Certification

A concise two week Six Sigma training for Green Belts.

Presents:

- The teamwork, process, and statistical tools to carry out Six Sigma.
- Implement the Methodology to achieve and sustain Six Sigma.

The Complete Six Sigma Initiative

The full deployment initiative to embark on the Six Sigma Breakthrough Model throughout the organization.

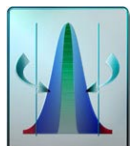

Includes:

- The Six Sigma Executive Overview, Achieving Six Sigma, Champion, Black Belt, Green Belt Six Sigma training and Certification.
- On-site review and support.

Why embark on Six Sigma?

Only by achieving and maintaining Six Sigma can an organization, especially those that are already successful, go to the next level of performance and be "best-in-class." In the modern marketplace being competitive is not enough. Organizations must strive to excel through improvement and innovation to become the standard by which others benchmark themselves; to become "best-in-class" not just in products, but also in services and transactions.

The DMAIC Approach

Six Sigma applies to service as well as to manufacturing organizations. Six Sigma utilizes the five-phase DMAIC model for business process improvement:

- **Define**
- **Measure**
- **Analyze**
- **Improve**
- **Control**

By applying the DMAIC model in improvement projects, Six Sigma practitioners can achieve unprecedented improvements and significant bottom line savings.

Advanced Systems Consultants

Advanced Systems Consultants is an innovator and a global leader in training and consulting in the implementation of six sigma to the service, manufacturing, production and fabrication industries. ASC is the first firm to teach Six Sigma and has 18 years of successful dissemination of 6s knowledge.

Over 18,000 individuals trained in the FIRST methodology to achieve and sustain Six Sigma.

When you care to be trained by the BEST and can tell the difference!

Key Benefits

- **Optimize Business and Manufacturing Processes**
- **Reduce Variability**
- **Minimize Defects, Errors and Mistakes**
- **Eliminate Waste and Inefficiency**
- **Improve Cycle-Time, On-Time Delivery and Productivity**
- **Achieve Total Customer Satisfaction**
- **Increase Market Share and Profitability**
